

ASICs as big as your ideas and as small as 90nm.

Unique expertise from the smallest to the biggest

A lot of companies make big promises, but only a few can truly deliver. At Toshiba we're:

- Accepting 90nm high-performance designs today
- Offering high-volume, production-proven 130nm manufacturing
- Producing 10 million gates and more

Complete process integration makes the difference

Toshiba really delivers with a seamless process from beginning to end. And because we operate our own

fabs, you don't have to worry about manufacturing, test, or packaging. Toshiba offers:

- High-performance ARM and MIPS cores and unique capabilities in eDRAM, MPEG-4, 802.11, and Bluetooth.
- Support for design planning, IP integration, and applications engineering
- Proven design flow with predictable timing closure and the latest EDA tools
- Flexible engagements from specification to GDS handoff
- Expertise through U.S.-based design centers

Get more than the basics

Toshiba has shipped thousands of successful ASICs and can help you turn your bright ideas into reality. Get everything you want in an SOC/ASIC, including world-wide capacity now. Contact us at bright.toshiba.com
